

Use this handy template to see which TuffTOP is right for your vehicle. Simply print of this page, cut out the shaded area and hold the template up to your rollbar.

Since the Mounting Bracket is the same for the SCR-44 and the XLR-52, here's how to determine which model is best for you:

When you sit in the operator's seat, and raise your arms straight above your head, are your wrists higher than the bottom of the roll bar? If so, the smallest TuffTOP (Model SCR-44) will suffice. If not, you should select the second-largest TuffTOP (Model XLR-52).
